Abstract

Currently, delays are a major problem in air transportation. Especially during the festival Which caused a lot of inconvenience to passengers Especially in the US Delay plane problems Or the flight to the destination is delayed for more than 15 minutes, accounting for almost 1 in 4 of all flights And directly affect the cost of US airlines up to 200,000 million baht per year, both in the form of salaries and allowances for employees Cost of providing accommodation and food for passengers Including having to order additional aircraft without needing Since having to maintain the same number of flights If you do not want to face a problem with a delay aircraft Experts have given several suggestions. And what are the problems that cause the aircraft to be delayed

Keywords: Delay, Low Cost, Maintenance

Introduction

Air transportation as a result, travel by plane is popular because it is convenient fast and safe the aviation business has a rapid growth, generating revenue, including The airline is a lot because consumers want fast convenience Saving and safety in traveling both in and outside the country therefore causing airlines to develop airline business systems to focus on Provide services with lower costs, operate economically But still maintain safety according to international standards by use methods to reduce costs in providing services Facilitating various types of low cost airlines Therefore, traveling with low-cost airlines has many reasons for delaying the airline. There are certain events entirely beyond your control which could impact your flight. When flight delays and cancellations occur at airports, they are usually due to one of the following reasons. Here's a look at why these events affect your flight, and what you should do if they happen to you

ResearchMethodology

To know and understand the problems that cause delays in low-cost airlines

There are many reasons for the problem of plane delays.

1. Problems that are beyond control Especially in terms of weather conditions such as fog, snow, storm, etc., causing the aircraft to not be able to land or fly from the airport either in the source or destination

2. Problems from airlines trying to use the most efficient aircraft By requiring to fly up within 30 minutes from the arrival of the destination There is no reserve time, so if one flight is delayed Will affect the other flights Of the aircraft must be delayed accordingly

3. The problems of the airport which has runway limited Causing the plane to have to queue in many ships than to fly up To solve the above problems Experts suggest that airports should have incentives for airlines to turn to use larger aircraft. In order to increase the efficiency of the airport to accommodate more passengers Including the construction of additional runways

4. Various airline problems Still popular for flights during the rush hour that passengers use, for example, New York Airport JFK Flight concentration is more than 90 trips / hour. In the early morning and evening of each day Causing many flight delays during this period

In the case of Suvarnabhumi Airport in Thailand Reverse Flights are concentrated during the night. Due to international flights to Europe, the service is very popular. Because he can rest and sleep in the plane and travel to Europe in the morning

5. The popularity of private planes has increased dramatically. The greater the amount of air transport Although this type of aircraft uses more than 5,000 small airports in the United States, it does not focus on 450 large airports used by various airlines. But has affected the aviation radio system with limited capabilities

6. The management problems of the airline itself, for example, have to spend more time repairing the plane than usual. Can not clean the plane inside Can not refuel Can not catch food on the plane Pilots coming to the airport.

7. Passenger delays Which sometimes may be shopping within duty free shops Make the plane slow Which some airlines have a policy to wait for the passengers to be full before flying But if it is a low cost airline, some places will not wait in any way Because they want to take advantage of the most efficient aircraft

Conclusion

The reasons of low cost plane delay, there are many reasons The fact of the matter is that delays and schedule disruptions are part of the air travel mainly because of the multitude of factors that come into when operating a commercial airplane. But for the sake of curiosity, let's take a look at some of the most common factors that cause a flight to be canceled or delayed

Finally, in the case of Thailand, it has started to experience more delays in aircraft since there are low cost airlines. Which will have frequent delays Sometimes having to delay for many hours, for example, that the travel schedule must change from midday to midnight. The Department of Air Transport has issued regulations regarding the rights of passengers. Which is effective from January 1, 2008 onwards

Discussion and Recommendation

If you are traveling on a low cost plane regularly It may be a problem with the delay of the airline Because low cost airlines may have more problems whether it is weather problems, safety, carrying bags or problems with the aircraft May be an issue that you cannot avoid If you do not want to face a flight delay

Should travel in the early morning flight Which is the first flight of that aircraft Which will fly the most time Because it does not affect the delay of other flights

Try to avoid traveling on the last flight of the day. Because if the delay occurs Making it impossible to connect to that flight. Passengers will not be able to find other flights to destinations
