

“On Developing Thailand Undergraduate Learning with Tactical Retrieval Practice”

ชื่อผู้รับผิดชอบโครงการวิจัยและผู้ร่วมวิจัย : Mr. James Todd Whitaker

งบประมาณที่ได้รับจัดสรร : งบประมาณรายได้ 20,000 บาท

ความสำคัญและที่มาของปัญหาที่ทำการวิจัย

The purpose of this research is to evaluate the usefulness of frequent retrieval practice as a strategy in improving student learning and achievement at International College, Suan Sunandha Rajabhat University (SSRUIC). Improving learning and memory has significant implications for student success at the International College: The ability to comprehend, to reconstruct knowledge, to increase vocabulary, to improve English skills, and to make inferences indicates meaningful learning and higher order cognitive skills. Classroom observation reveals a need to deepen students' ability to retain and retrieve information, which, if accomplished, can provide better and more meaningful learning. It is imperative that students increase their critical thinking and problem-solving skills, and foreign language proficiency skills so that they may effectively compete for the best jobs in the ever increasing competitive Thai job market
